

A panoramic view of the Chicago skyline under a bright blue sky with scattered white clouds. The foreground shows a marina with numerous sailboats on the water. The skyline includes several prominent skyscrapers, such as the Willis Tower (left), the Aon Center (center), and the Willis Tower (right).

Solarbrite
Hyundae PVC Lamination Film

Glass Decoration Film

< FEATURES >

● Shatterproof / Safety function

Safety secured by preventing damages to glass and preventing secondary accidents from glass fragments
– Pressure sensitive adhesive for advanced safety film is used.

● Protection of Privacy

Protected individual privacy by intercepting visibility from outside and makes the direct light soft to come in and creates comforting and pleasant atmosphere

● Interior Design Effect

Possible to direct interior space simply and freely by applying various patterns and etching design

● Outstanding Dimensional Stability

Product desorption of shrinking or lapsing is prevented to prevent contamination from adhesive after installation

< NOTICE FOR STORAGE >

Roll Fixing Secure the rolls with an adhesive tape to avoid unrolling when storing after opening. Failure to adhere to these guidelines may result in the uncurling and damaging of the product.

Keep Clean If contaminated by dust or dirt, poor installation may result.

< NOTICE FOR USAGE AND MAINTENANCE >

● Notices for Installation

Internal Installation

In principle, the internal installation should be done for the glass surface in contact with the outside. In case of external installation, the functionality of the product may be compromised due to contamination, breakage etc.

Cleanness of Surface

As foreign materials or contaminants may damage the appearance after installation, please check the cleanliness of all materials before starting the installation. (i.e. contamination by static electricity etc.)

Use the proper amount of neutral detergents

Dilute the proper amount of neutral detergents with water and spray them uniformly to the glass surface and the adhered side of product for installation. If there is a lack of dilution of neutral detergents, the middle part of the sheet may be adhered during installation which makes it difficult to remove the water. Additionally, if excessively used with neutral detergents, the adhered side may be slippery, which may cause dislocation when compressed with a push stick.

Spray the diluted water to the surface of product

When compressing with a push stick after fixing the location, spray water to the surface to reduce the friction between the product and the push stick.

The exclusive push stick recommended

As a scratch may occur on the surface when installing, it is recommended to use the exclusive plastic push stick. Additionally, if there is a bump on the surface of the push stick, remove it softly before

Avoid bending or folding

Because of the sensitive nature of PET Film, the product may be bended or folded while installing due to carelessness. Special attention should be paid while handling.

Silicone area of glass

For the existing glass, it is not easy to attach the product over the silicone area of the edge. It is imperative that no installation takes place on the silicone area.

Remove water

Before starting, remove water sufficiently to prevent the generation of stains after installation.

● Notices after Installation

When cleaning

After installation or when cleaning generally, it is prohibited to use solvents or strong detergents – as they may cause damage to the product. Use water or neutral detergents with soft clothes to remove the contaminants.

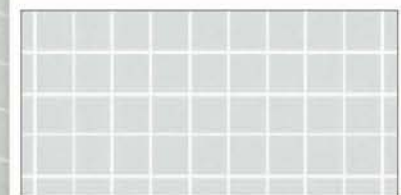

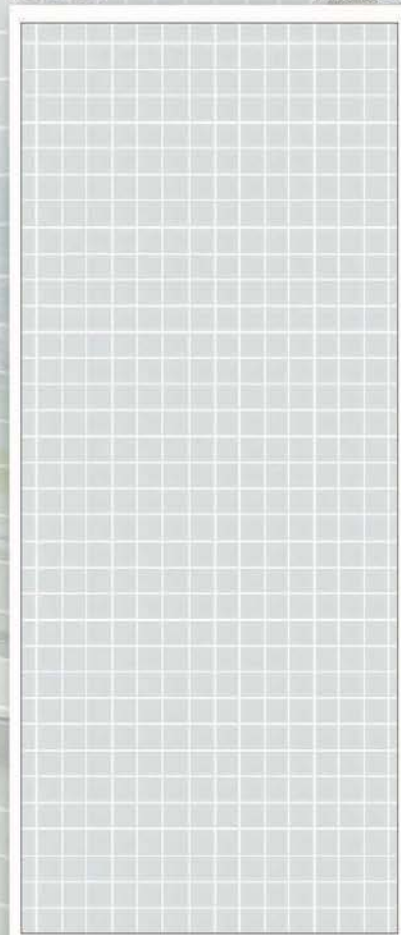

Scratch on the surface

Dish sponges, brushes, or sharp and solid objects may scratch the surface. Please use caution when using.
